Dear Hiring Manager,

My name is Nathan Walker, and I am a highly motivated and curious electrical engineer interested in the Test Technician I/II position at Sage Ag Inc. I enjoy working in hands-on engineering roles that combine field work with technical problem-solving, and I am excited by the opportunity to support the testing and development of autonomous and robotic equipment. I am confident that I could make meaningful contributions to Sage Ag's testing efforts and would take pride in clear, helpful communication with engineers and fellow technicians.

I bring a combination of real-world field experience and engineering background. I have worked in asphalt construction operating heavy equipment including steam rollers, pavers, backhoes, and loaders, which has given me an appreciation for machine behavior, safety, and the realities of working in field environments. This experience pairs well with my technical background in supporting and troubleshooting complex systems, particularly in situations where conditions are imperfect and systems are still evolving.

In my current work, I have been involved with sensing and embedded systems, including implementing and testing real-time signal processing algorithms for array-based applications. I am comfortable being given a task and working independently to diagnose issues, collect data, document findings, and help move a project forward. I have also worked on revitalizing legacy systems with minimal documentation, which required patience, structured testing, and a willingness to learn quickly.

Throughout my time at Utah State University, I have learned the importance of being teachable. Early research experiences showed me how much there is to learn in real engineering environments, and since then I have made it a habit to seek feedback, ask questions, and treat challenges as opportunities to improve. I value teamwork and enjoy supporting others while continuing to grow my own skills.

Thank you for considering my application. I would welcome the opportunity to discuss how my background in heavy equipment operation, field testing, and electrical engineering can support Sage Ag's work. Please feel free to reach out if you have any questions.

Best regards,
Nathan Walker
