Scheduling HW

-p1 determine if the following are schedulable
   n*(2^1/n - 1)
   task set 1:
      U = 30/80 + 30/90 + 20/120 = .875 not less than 0.7797
   task set 2:
      U = 30/80 + 40/120 + 40/150 = .975 not less than 0.7797
   task set 3:
      U = 40/80 + 20/100 + 25/120 = .9083 not less than 0.7797

   None are schedulable due to the sufficient not necessary test

-p2 determine system utilization and draw a timing diagram for
RMA, EDF, LST

   U = 1/8 + 3/12 + 3/18 + 5/24 = .75 utilization

-p3 determine if the task set clears the RMA sufficient not necessary
test, is it schedulable with RMA, and draw a diagram for RMA< EDF, LST

   U = 5/10 + 5/20 + 10/40 = 1.0, 3*(2^(1/3)-1) = 0.7798
   fails the RMA sufficient not necessary test

-p4 given the task set is it schedulable for RMA.

   U = 2/10 + 4/12 + 5/15 + 2/30 = 0.933, 4*(2^(1/4)-1) = .7568
   fails the sufficient not necessary test
